

The only preprocessing applied to the answer labels was to use the CUIPhrase as the main answer key for diagnosis and seizure frequency instead of the raw text value. Often they were the same label, but the CUIPhrase sometimes included cleaner labels for matching answers e.g. the normalised CUIPhrase 'temporal-lobe-epilepsy' was used over the text 'epilepsy-Probable-temporal' for the same span.

I. RESULTS

A. Development Environment

B. Methods

C. Models

D. Structured Evidence

E. Ablations

F. Error Analysis

II. DISCUSSION

III. CONCLUSION

REFERENCES

Please number citations consecutively within brackets [?].
The sentence punctuation follows the bracket [?].
